

Created by MyCRM Ltd

eMap – Adding On-Demand Geocoding to a Custom Entity

Step 1 – Export the entity that the On-Demand button is to be installed on

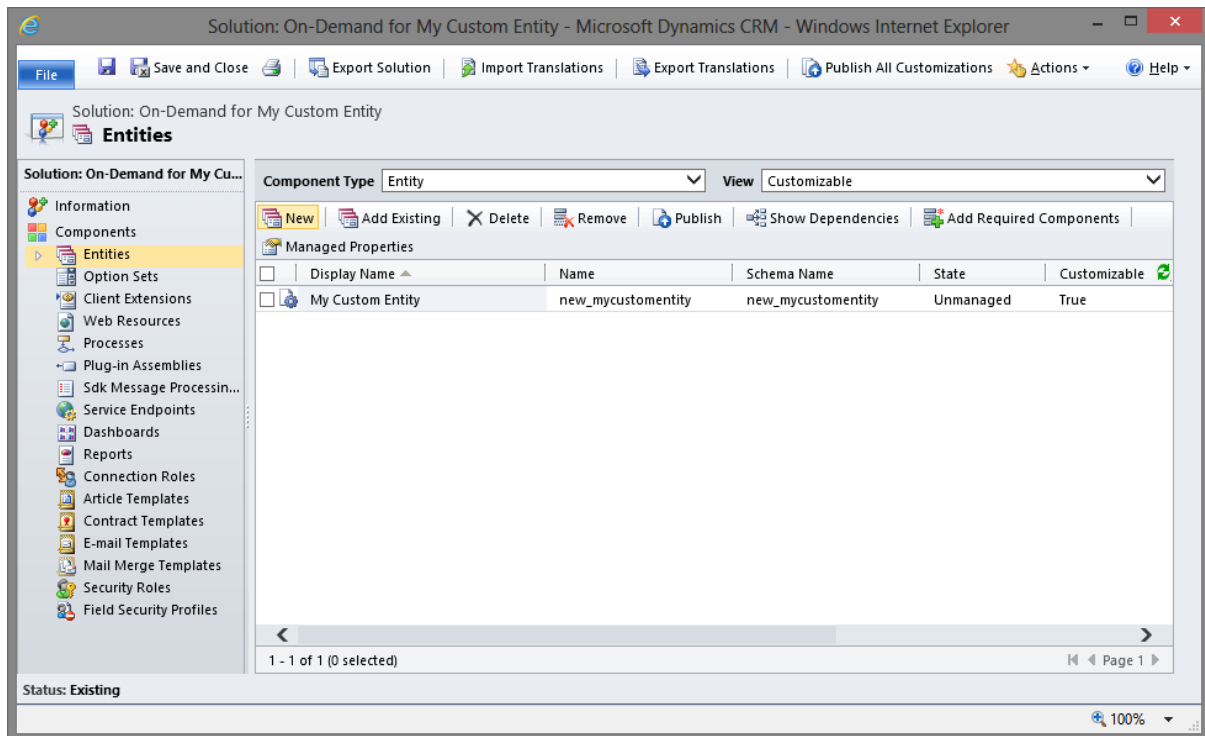

- Go to Settings -> Customizations -> Solutions
- Create a New solution, using something like the following:

The solution name, publisher and version don't really matter for our purposes.

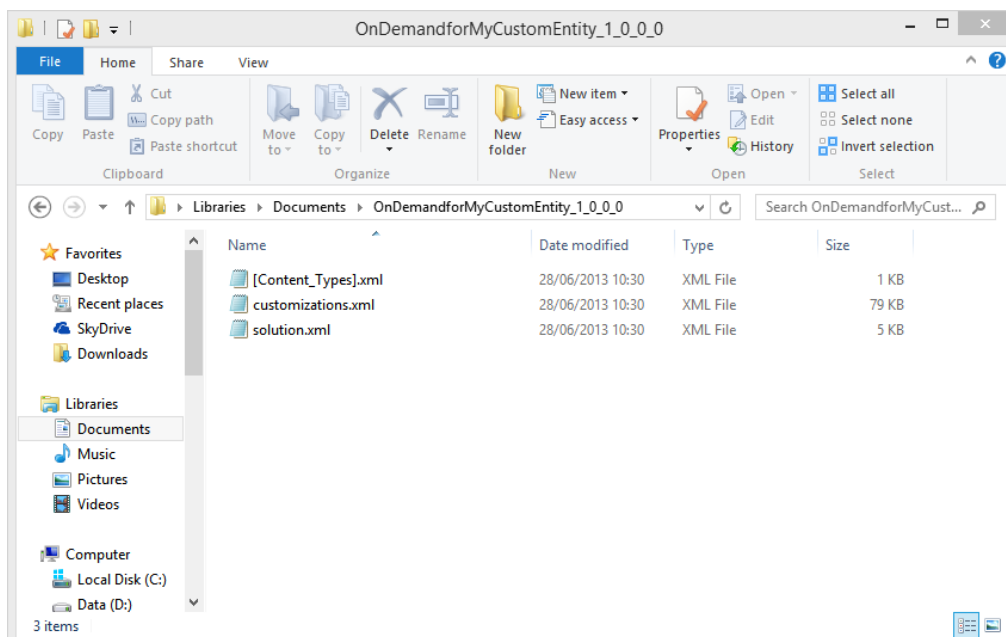

- Add the entity you wish to install your On-Demand button on (Components -> Add Existing -> Entity):

- Export the solution – click next, next, export leaving all options default.
- Save the solution zip file somewhere accessible.

Step 2 – Extract the solution contents

- Extract the resulting .zip file to a new folder. You should now have three xml files:

- Open **customizations.xml** in your favourite text editor.
- Because we only want to change the entity ribbon settings, we can delete the **EntityInfo**, **FormXml** and **SavedQueries** XML nodes. This means deleting everything inside and including the `<EntityInfo>...</EntityInfo>`, `<FormXml>...</FormXml>` and `<SavedQueries>...</SavedQueries>` tags.
- We can also clear out the **EntityRelationships** node, as we don't need to change anything there.
- Your **customizations.xml** file should now look something like the following:

```
<ImportExportXml xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">
  <Entities>
    <Entity>
      <Name LocalizedName="My Custom Entity" OriginalName="My Custom
Entity">new_mycustomentity</Name>
      <ObjectTypeCode>10002</ObjectTypeCode>
      <RibbonDiffXml>
        <CustomActions />
        <Templates>
          <RibbonTemplates Id="Mscrm.Templates"></RibbonTemplates>
        </Templates>
        <CommandDefinitions />
        <RuleDefinitions>
          <TabDisplayRules />
          <DisplayRules />
          <EnableRules />
        </RuleDefinitions>
        <LocLabels />
      </RibbonDiffXml>
    </Entity>
  </Entities>
</Roles></Roles>
<Workflows></Workflows>
<FieldSecurityProfiles></FieldSecurityProfiles>
<Templates />
<EntityMaps />
<OrganizationSettings />
<optionsets />
<Languages>
  <Language>1033</Language>
</Languages>
</ImportExportXml>
```

Step 3 – Inserting and changing the On-Demand Ribbon XML

- Here is the XML required for the On-Demand Geocoding ribbon button:

```

<RibbonDiffXml>
  <CustomActions>
    <CustomAction
      Id="myce.Mscrm.Form.#EntityName#.MainTab.Geocoding.CustomAction"
      Location="Mscrm.Form.#EntityName#.MainTab.Groups._children" Sequence="80">
      <CommandUIDefinition>
        <Group Command="Mscrm.Enabled"
          Description="$LocLabels:myce.Mscrm.Form.#EntityName#.MainTab.Geocoding.Title"
          Id="myce.Mscrm.Form.#EntityName#.MainTab.Geocoding" Sequence="80"
          Template="Mscrm.Templates.3"
          Title="$LocLabels:myce.Mscrm.Form.#EntityName#.MainTab.Geocoding.Title">
          <Controls
            Id="myce.Mscrm.Form.#EntityName#.MainTab.Geocoding.Controls">
            <Button Command="myce.#EntityName#.Geocoding.FormCommand"
              Id="myce.#EntityName#.Geocoding.FormButton"
              Image32by32="$webresource:myce_/images/geocode_large.png"
              LabelText="$LocLabels:myce.#EntityName#.Geocoding.FormButton.LabelText" Sequence="20"
              TemplateAlias="o1"
              ToolTipTitle="$LocLabels:myce.#EntityName#.Geocoding.FormButton.ToolTipTitle"

  </LocLabel>
</LocLabels>
</RibbonDiffXml>

```

- You should replace all instances of #EntityName# with the system name for your entity, in this case **new_mycustomentity**.

- Once the find/replaces are complete, you should copy and paste the On-Demand ribbon XML and replace the <RibbonDiffXml> node in your solution's **customizations.xml** file. In this example, the final **customizations.xml** file would look as follows:

```
<ImportExportXml xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">
  <Entities>
    <Entity>
      <Name LocalizedName="My Custom Entity" OriginalName="My Custom
Entity">new_mycustomentity</Name>
      <ObjectTypeCode>10002</ObjectTypeCode>
      <RibbonDiffXml>
        <CustomActions>
          <CustomAction
Id="myce.Mscrm.Form.new_mycustomentity.MainTab.Geocoding.CustomAction"
Location="Mscrm.Form.new_mycustomentity.MainTab.Groups._children" Sequence="80">
            <CommandUIDefinition>
              <Group Command="Mscrm.Enabled"
Description="$LocLabels:myce.Mscrm.Form.new_mycustomentity.MainTab.Geocoding.Title"
Id="myce.Mscrm.Form.new_mycustomentity.MainTab.Geocoding" Sequence="80"
Template="Mscrm.Templates.3"
Title="$LocLabels:myce.Mscrm.Form.new_mycustomentity.MainTab.Geocoding.Title">
                <Controls
Id="myce.Mscrm.Form.new_mycustomentity.MainTab.Geocoding.Controls">
                  <Button

<FieldSecurityProfiles></FieldSecurityProfiles>
<Templates />
<EntityMaps />
<OrganizationSettings />
<optionsets />
<Languages>
    <Language>1033</Language>
</Languages>
</ImportExportXml>
    
```

Step 4 – Re-import the solution

- Save the **customizations.xml** file.
- Zip up the three solution files into a new solution zip:

- In CRM, import the solution using all default settings.
- The import should complete successfully. If not, you can save the import log file to get a better idea of what went wrong.
- Once the solution is imported, you must **Publish all Customizations**.
- Your custom entity should now have the On-Demand Geocode button.
- You may delete the new solution from CRM as it is no longer needed. The On-Demand Geocode button will remain.

Removing On-Demand Geocode from the custom entity

If you wish to remove the On-Demand Geocode ribbon button from the custom entity after using the above instructions, please follow the following steps:

- If you still have the unzipped solution files, you can use those to create a new solution for uninstallation.
- If not, please follow Step 1 of the installation instructions above to produce a new solution containing your custom entity.
- Open the **customizations.xml** file in a text editor.
- Replace the entire `<RibbonDiffXml>` node with the following xml:

```
<RibbonDiffXml>
  <CustomActions />
  <Templates>
    <RibbonTemplates Id="Mscrm.Templates"></RibbonTemplates>
  </Templates>
  <CommandDefinitions />
  <RuleDefinitions>
    <TabDisplayRules />
    <DisplayRules />
    <EnableRules />
  </RuleDefinitions>
  <LocLabels />
</RibbonDiffXml>
```

- Save the **customizations.xml** file.
- Zip up and import the solution as per Step 4 of the installation instructions. Make sure you Publish all Customizations, and you may delete the solution thereafter.
